Active Whois Crack + Keygen For (LifeTime) Download [Mac/Win]

A free and very easy to use tool that helps you gather all the details you need about a domain, its WHOIS server, IP address, registrar, registrant, expiration date and much more. Active Whois Crack Keygen is a simple and straightforward application

that you can use to obtain information about an online domain. In a few steps it can help you gather details about its DNS records, owner, IP address and much more. A user-friendly interface to make things easier Active Whois displays a more than comprehensive interface which should be fairly simple to use by just about anyone when it comes to the basics. If you're a novice user then all you have to do is enter the domain name for which

you want to extract the data and then click one button. In a matter of seconds the application does its job and provides the requested data, intuitively organized in an easy to read list. The displayed content can then be printed or if that's not the case, then you can simply copy that which you need, save it to Clipboard and then insert it anywhere you want. Request information from any WHOIS server Truth be told, there really isn't anything complicated to

Active Whois and its means of obtaining data, not even when you want to interrogate a specific server. All that is required of you is that you specify the server address, set the port number, enter the custom request and then click the 'Ok' button. By default, the application works with over one hundred servers when searching for information but if you know for a fact that one in particular is more trustworthy or delivers a complete set of

data, then you are free to use it. If anything, Active Whois provides a very practical solution to investigate domains that seem suspicious. Extract and group domain data in a neat list To wrap it up, if you're looking to gather information for just about any domain that is out there, then you can certainly use Active Whois.

Active Whois Description:
A free and very easy to use tool that helps you gather all the details you need about a domain, its WHOIS

server, IP address, registrar, registrant, expiration date and much more. A quick and painless way of finding all the DNS records of an domain name. The application lets you filter the results by the name of the DNS server, registry or registrar that's used to manage the domain name and find the proper contact information on

Active Whois is a whois software program that provides an easy way to quickly extract whois information from various whois servers. You can use it to extract information about web domains and IPv4/IPv6 addresses. It can also print the data to the user's default printer and create a text file that can be pasted into other software like Word, or any other text editor. An Internet

domain name is an alphanumeric string of letters, numbers, and hyphens, used to identify and categorize the top level domain (TLD) of a website or email address, as in the domain name `www.graham-internet.com`. The Internet Corporation for Assigned Names and Numbers (ICANN) is a United States-based private, non-profit corporation that is responsible for the coordination and management of the DNS root zone, the domain

name system, and the IP address allocation system for the Internet. ICANN was formed in March 1995, following the breakup of the United States-based Censorship Clearinghouse in 1994. FAQ: How Do I Get Started? What's in the Main Program? There are three main programs: - Download Module: For quick access to the Internet for your purposes, it has a built-in module that makes it easy to download any type of content. - QR Code Module: QR Codes help

you add content, information and/or designs to your websites, magazines, or anywhere else you want to print. -

Explorer Module: This module helps you easily download any type of file you may need from the Internet. It has a built-in module to help you manage all your files. What is the Supported Browser? We've made it a point to have an app that will work on all browsers, both mobile and desktop, and we've done it. The main program comes

with many different modules with a wide range of different capabilities, making the app usable on any device, regardless of the browser it is being used. Are there any other features? We've also included many secondary features, such as a scanner, QR Code generator, spreadsheet, search bar, and an extensive set of commands for ease of use. What's the Maximum file size? The maximum file size that the app can download is 1,024M. It is

up to the user to download a file that is within that limit. I'm new to the Android world

What's New in the?

Active Whois is an application that lets you explore and gather data about any domain that is connected to the Internet, something that will help you learn more about its owner, DNS records, IP address, owner's contact information, web sites, and more. Read more:

GoGuardian - protects your computer against annoying Java-based Adware

GoGuardian is a software solution, which offers all the tools to protect your computer against annoying Java-based Adware. This solution makes it impossible for the Adware to install itself and infect your computer. The Adware ads are blocked and the malicious software is deleted. If you see annoying popup ads and see links that are suspicious, then you need

this solution. The Adware uses Java to show Ads, which can be annoying. Some of the ads are displayed by programs you have already installed on your computer. If you want to block all Java popups, then this program is what you need. GoGuardian - protects your computer against annoying Java-based Adware for Windows: GoGuardian is a tool to protect your computer from the annoying Java-based Adware. The Adware uses

Java to display popup ads and shows you suspicious links. This can be annoying for you, because you are not able to use your computer freely and the ads can get quite annoying. The Adware uses Java to display ads, which means that you should not use this software to view the pages that are linked in the ads. The software enables you to protect your computer against annoying Java-based Adware popups. This works by blocking all annoying ads, so that you

can use your computer freely again and the popups are not displayed anymore. You are able to uninstall the Adware easily with the help of GoGuardian. You can remove all the programs and files that the Adware has created, and this should also remove the Java popups. A few click on the buttons, and you can remove the Adware and all the files and programs, that it installed. The program does not slow your computer down or make it run unstable. GoGuardian

has an easy to use interface, with which you can protect your computer against annoying Java-based Adware popups. The interface is intuitively organized to make it easy for you to use and with the help of this tool, you are able to protect your computer against annoying Java-based Adware popups.

How to uninstall

GoGuardian: To uninstall GoGuardian, please follow the manual guide, that will help you to remove the program properly and

completely. Right-click on the icon of the program, you want to uninstall and press on Uninstall. A message will appear, telling you to confirm whether you really want to remove GoGuardian from your computer. Press OK and GoGuardian will be removed. The uninstaller also removes all the files and folders associated with

System Requirements:

OS: Windows XP/Vista/7

Processor: 1 GHz or faster
