If you intend to be creative using Photoshop, always create a backup of your image. Adobe Photoshop CS5: Top Ten Tips The following ten tips offer an excellent starting point when creating images using Photoshop. 1. Learn to be patient Many Photoshop users have a false sense of speed. They are used to creating graphics in five to ten minutes. They forget that it takes a great deal of time to create a single image, regardless of the skill level of the creator. The first thing to do is to learn to be patient. This may sound obvious, but it isn't until you experience the agony of the not-yet-complete image that you understand that it takes time to produce an image. To help Photoshop beginners stay patient, learn to break down an image into components. For example, an entire image may include a few layers of objects, a layer of borders, a layer of a background, and so on. This way you are able to visualize the image in stages, such as an object layer, and work on each layer in order. This approach is a great way to avoid getting lost in the complexity of the project. 2. Learn to observe Observe and then observe more. There's always something to learn from watching someone else's creative efforts. You can learn about color, light, shadow, and various textures. Take classes, read magazines, check out websites, or even ask a knowledgeable friend for advice. Observing is one of the best ways to learn and will save you the money you'd spend on books or classes. 3. Break down an image into components Break an image into components to get a better understanding of how the elements of an image relate to each other. For example, is the person in the photo the focal point? Or is the background of the photo the focal point? Or is it the buildings and the light that forms the focal point? You can always change the arrangement of elements later, but this helps you start with a better concept. You can also apply a technique to one element, such as light on one object, and move that object later, such as a person. 4. Understand layers Understanding layers is the key to creating sophisticated images using Photoshop. Layers can be extremely powerful in organizing your work, especially when used together. For example, you can use one layer to create the background of an image and another to create a banner for the image. You use multiple

Q: How to get date and time of submission in MongoDB using Node.js? I'm using express and mongodb for my project. How can i get the date and time of submission in MongoDB using Node.js? For eg.: My collection is quiz and i have a field called time. How can i get the current date and time in MongoDB using Node.js? A: This should work: `const date = new Date() const time = date.getTime() const dateString = date.toString() const timeString = date.toLocaleString() // use the string to do whatever you want with it` The official mongo docs on this are here [is a lot to remove if there is a problem](#). Removing a set, then the node it belongs to, then the edges connected to it, and then updating the objects containing the removed elements to keep track of what they were before, etc. It's most likely better to use the regular `graph_traversal` approach. So, in your case you have a set of nodes, no arrays of nodes. You just have a bunch of nodes, each with data. In this case, you might actually be better off using the visitor pattern, where each node has a visitor who traverses the whole graph, with each node having its own data to pass along. You might even be able to do away with the graph in some cases, and just put the object in the visitor.
