Below is a look at the basics of Photoshop's tools and layers. What is Photoshop? Think of Photoshop as the photo editor for Microsoft Office. Where Word can be used for documents, PowerPoint for presentations, and Excel for spreadsheets, Photoshop is the photo editor. It's used by most people to modify photos and present them to others in one way or another, whether they realize it or not. Adobe's Photoshop is both a raster and vector-based image editor. A raster is a pixelized image and is used for things like photographs, brochures, logos, and PowerPoint presentations. A vector is a line-based image and is used for outlines, text, diagrams, graphics, and websites. Graphic design, visual communications, photo editing, art, video, and animation often require the use of both raster and vector-based graphics. Whether you work in print, online, or on your phone, Photoshop provides creative tools to help you achieve professional results. Why Use Photoshop? Adobe Photoshop is the industry standard of image manipulation software. This means that you will need to know Photoshop for virtually any position that requires visual communications to occur. Even if you don't plan on working with graphic design, illustrations, or any other type of creative or graphic job, it's important to at least have a basic understanding of Photoshop's capabilities. Adobe Photoshop has the most robust feature set for advanced users. However, its features are intuitive, easy to learn, and powerful. With the help of Photoshop, you can produce highly professional results. What to Expect From Photoshop Photoshop allows you to modify text, images, and color. It can be used to manipulate photographs, create complex illustration work, create posters, and apply creative filters to almost any file. Use them to add the effects, apply colors, use gradients, and more. You can also use blending modes to create a variety of effects. You will need to know what your options are and how to use them before using Photoshop. Photoshop is a computer graphics image editor used in publishing, design, and art. Similar to others and not the only editor, such as Paint, this app makes use of layers, snapping, masks, vector tools, and a complex pixel-by-pixel representation of color, depth, and style. All other Photography apps will show up here if you use that category. Software to edit images includes general photo editors, such as Pixlr and Photoshop, as well as specialized image-manipulating programs. Some of these are available for Mac and PC, whereas others are only available on one platform or the other. This app lets you change the size of the image by resizing its width and height in the Dimensions panel, which works from 0.01 to 10,000 pixels. To make adjustments to an image's contrast and color, you can either adjust these values independently, or use the Hue and Saturation features to change the color and contrast together. To help you make color adjustments, you can apply a Vibrance adjustment to a portion of the image, or adjust the brightness and contrast using the Curves tool. Another method for adjusting color is to overlay the color and gray-scale images, in which case the bright parts of the gray-scale image will be highlighted. You can also use the crop tool to cut and crop an image. Features Additions to the 2014 version (CS5) include: Many improvements to the effects, brush, and lasso tools Customizable workspace tabs Custom shortcuts Improved UI elements and integration with other Creative Suite apps

1895–96 Stoke F.C. season The 1895–96 season was the seventh season in the history of Stoke Football Club. It was Hall's final season in charge of the Potters after he was forced to resign following a transfer embargo on the club having been put in an insolvent state by the shareholders. He would finish his second season in charge at the Victoria Ground with a record of 14–12–11. Season overview Cobbett had been working hard in his role as secretary-manager and was also working on some personnel issues, having taken on two new full-back additions; John Rees and George Robson. He also signed another former player, Tom Coventry. It was quite evident that the team was in need of new blood, so after the end of the season's campaign, he sold Harry Holmes to Crewe Alexandra, Joe Blake to Port Vale, Cope, Speight, George Jeffreys and Jimmy Edwards to Crewe Alexandra, George Rowland to Wolverhampton Wanderers and George Goss to Port Vale. Only Coventry, Robson and Rees stayed at the club, Rowland returned to Stoke whilst Goss and Jeffreys ended their association with the club in quick succession. Metallica has lost the record for the biggest U.S. stadium crowd, smashing the previous mark by more than 30,000 fans. When the band played Oakland's O.co Coliseum on Sunday for a pair of concerts with Breaking Benjamin, the headliners said there was almost 80,000 fans in attendance. The highest previous U.S. crowd for a show in an American venue was 69,817 in the stadium for a Metallica show in Houston on July 25, 2004. Metallica said in a statement the crowd "may have been the greatest American rock'n'roll show ever," and O.co Coliseum posted an aerial photo showing the throng of fans. Canadian promoter Dennis Bernstein, who promoted the show, said "with many many stages this was a brutal, brutal show... There were several very large scaffolds out on the concourses." The Aryl hydrocarbon receptor (AhR) is a cytosolic receptor for a variety of exogenous chemicals including dioxin, 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD) and 2,3,7,8-tetrachlorodibenzofuran (TCDF). Because TCDD and TCDF are toxic, this study examined the role of the AhR in cell proliferation. Results demonstrate that L-cysteine can stimulate cell proliferation in primary mouse keratinocytes via AhR-mediated enhancement of the ERK 1/2 signaling pathway. L-cysteine-induced up-regulation of ERK 1/2 could be blocked by inhibitors of Src family kinases indicating that this signal transduction cascade may be mediated by activation of AhR. In contrast, L-cysteine inhibited cell proliferation in human osteosarcoma U2OS cells. This inhibition was not caused by altered kinase activation but rather by increased p21 and p53 levels. In human keratinocytes, the AhR antagonist CH223191 also inhibited cell proliferation in a dose-dependent manner suggesting that the inhibition of proliferation by L-cysteine in U2OS cells may not be mediated via the AhR. These data demonstrate that AhR activation by L-cysteine has cell-type specific effects on ker
