SolidCP License Key

How to Install SolidCP: Click "Add new software" button Select "Install and Update" Select "Download" tab Find and select the file "SolidCP-Setup.exe" Select "Run" button Read the license agreement and follow the instructions. Click "Install" Once the setup is complete, a popup window will appear, click "Finish" button How to Uninstall SolidCP: Click "Add new software" button Select "Remove" button Find and select the folder "C:\Program Files\SolidCP\SolidCP.exe" Click "Remove" button SolidCP Pre-requisites: Windows 7, Windows Server 2008 Microsoft.NET Framework 2.0 SQL Server Express (locally or on a remote machine) Internet Information Services (IIS) SolidCP Supported OS: Windows 8 / 8.1 / 10 Windows Server 2012 / 2012 R2 32-bit / 64-bit SolidCP Supported Server: IIS 7.5 SQL Server 2005 SQL Server 2008 SQL Server 2008 R2 SQL Server 2012 How to Install SolidCP: Note: SolidCP is a freeware and available for free download from its homepage. At this moment, SolidCP is still in a beta version. So, you can choose from several editions: Standard - it's the most basic edition of the software and it includes all components that are needed to support any of the SolidCP editions. Developer - it allows you to create your own modules, which are independent of the other components. Full - this is the most complete edition. It includes all components in the previous editions, plus additional modules such as: Advanced functions for Azure VM management; Hibernate and shutdown scripts for Linux VPS; HPA for IaaS; Microsoft Office for Windows Server. There is also a trial version of the program, which you can download from the official SolidCP website. While downloading, you will be asked to agree to its license agreement. By default, the program will be installed on C:\Program Files\SolidCP. You can change this location by selecting an alternative location in the wizard.

SolidCP Requirements: In

SolidCP [32/64bit]

All-in-one managed web hosting solution for small business and reseller Multi-vendor (IIS, Apache, PHP, MySQL,...) SolidCP is a server software solution designed to help you provide hosting services to your clients. It's a fork of WebsitePanel, a project that had started over 3 years ago and was pretty good, but it was a shame they stopped developing it, and nobody picked up the mantle. SolidCP is a fork of WebsitePanel and was created to improve upon the latter in a number of ways. Most notable is that it's based on the Mono Framework, which means you can install it on all modern Linux distributions and Windows without needing to install Mono first. This lets you run it on Windows Server 2008, 2008R2, 2012 and 2012R2, which are the most recent versions of Windows. You also get the ability to use Mono apps on Windows. SolidCP is a relatively easy to install and configure, but the documentation is a bit lacking. We hope to get better documentation available for it. The community for SolidCP is very active on IRC and the XMPP network as well. Go to to see a list of the most popular features of the software. Features: Multi-host network management. Management of multiple servers and services from a single user interface. Collects server hardware and software usage data to help diagnose problems. Comes with a template for easy setup of your own multi-host network. Custom domain name generator. Database administrators can set up and configure all databases automatically. A range of server web applications can be hosted directly on the server and managed by the management software. An administration tool that can be used to schedule tasks and monitor service health. Comes with a template for easy setup of your own multi-host network. Installation Requirements: The SolidCP Server is compatible with the following operating systems: Windows Ubuntu OpenSuSE Debian Fedora Linux Mint Android Web hosting providers often host a variety of servers on their websites, but they generally don't have any direct control over them, which makes it very difficult to manage them all from a single website. SolidCP, on the other hand, is a centralized management software solution that provides you with a centralized, user-friendly web portal that enables you to control and manage all of your servers and services from a single web browser. You can host several websites, web applications and databases on a single server or run multiple servers that host multiple websites or web applications and databases. In addition, SolidCP

What's New in the?

Build your own powerful website by easily and efficiently creating, managing and maintaining a website with this easy-to-use, fast-to-learn, and affordable website creator. Use the intuitive drag-and-drop interface to build a professional website with more than 200 templates and themes, including scripts, skins, banners, and much more.
