WiFi hotspot creation tool that can be accessed from both Windows and Mac versions. You can easily configure your virtual Wi 6a5afdab4c

Connectme - (Hotspot)

Connectme - (Hotspot) is an easy-to-use Wi-Fi network connection creator and web server. All you have to do is select the wireless network adapter in your computer, set the adapter's parameters, set up a new Wi-Fi connection, and you're done. Connectme - (Hotspot) tips and tricks: - Change the channel. That way, other devices that are on the same channel as yours will be able to find you easier. - Connect to your home network. You can also use your home router as a fallback in case the wireless network you want to use is not found. - You can save your network configuration as "pattern". That way, when you create a new Wi-Fi network and remember the network name and the password, you won't have to enter all of them every time you need

to create a new connection. - When you set up a new Wi-Fi connection, if the connection is not the best, the system will automatically select the best one. - Overheating your computer, if there is any, will cause the router to fail. You have to set up your virtual router manually. - If you set up multiple Wi-Fi connections, for example, if you want to share your Internet connection with other Wi-Fi devices in your house, you can easily select and unselect them. Connectme - (Hotspot) Screenshot: Connectme - (Hotspot) Review: Not being able to share your Internet connection with other devices can be frustrating, especially if all of them have wireless capabilities. Luckily, there are software solutions that can solve these problems. One of them is Connectme - (Hotspot), an application that can turn your computer or laptop into a virtual Wi-Fi router,

in order to share your Internet connection with other devices. It requires .Net Framework installed on your computer in order to function efficiently. Handy and easy to use virtual router creator with intuitive layout The program helps you transform your laptop or computer into a Wi-Fi hotspot, providing that you have wireless network device. This has a multitude of uses, as you can share your broadband or dial-up Internet connection with devices that support only wireless networks, such as smartphones. Besides, you can create a customized virtual Wi-Fi router, by choosing a broadcast name and a password for your network. The password
