BitDefender 2007 released its preventive analysis utility. It promises to analyze and filter malicious software and halt the spread of harmful programs. The program works under the PC's operating system. Scanning and prevention The modern user does not just download.exe files to his computer anymore. The measures and precautions taken by the software developers make this process tougher. If an unknown file comes by, your antivirus program will be asked to scan it. However, some very rare cases of harmless or even certified software ending up with malware-like properties still occur. If that happens, your antivirus should be able to separate the real file from the false one. The effectiveness of its security is in the hands of the user, and therefore, BitDefender can't promise you that scanning should always work. Nevertheless, it does a good job in most situations. Download scanner BitDefender doesn't just scan your files. It may also try to block access to certain malicious websites. That's possible when the connection to a suspicious site is attempted, and the software also prevents downloads of potentially harmful files that you haven't yet opened. Any action that a program takes during the scanning operation is performed in its virtual laboratory. Microsoft released a new service to test computers in order to help users identify weak or bad programs. This testing session is carried out in accordance with the Windows Vista requirements. SpeakUp! is an easy-to-use support software that allows you to record your conversations on your computer. You can either save them as audio files or create and print logbooks that work with the program. Office 2007 has built-in support for programs used for Internet filtering.
