invention relates to a
process for preparing a
vinylidene chloride
polymer. More
particularly, it relates to a
process for preparing a

vinylidene chloride polymer in the presence of a titanium compound catalyst which exhibits improved polymerization activity and exhibits a reduced tendency to cause deterioration in the polymer yield. A process for polymerization of vinylidene chloride is well known. For example, U.S. Pat. No. 3,260,608 describes a process for

polymerizing vinylidene chloride wherein a chlorine and a titanium compound catalyst are used. In the polymerization process of vinylidene chloride, the yield of vinylidene chloride polymer obtained is often reduced and the purity of the polymer is often lowered. In addition, the polymerization is carried out in the presence of a

suspending agent such as the polymerization initiator and a stabilizer such as hydroquinone in order to obtain a good yield of polymer. Polymers of vinylidene chloride are generally used in the form of a powder. It has been found that, depending on the apparatus in which a polymerization product is handled, polymer particles may be highly

agglomerated. The agglomeration means that, when the polymer particles are injected into drums, they are blocked to cause plugging of nozzles by the agglomerated polymer particles, resulting in undesired phenomena such as clogging of drums. It is an object of this invention to provide a process for preparing a vinylidene

chloride polymer which is free from the above described problems.Q:

Baking with Rosemary I don't know anyone who doesn't love Rosemary, it is a touchstone of the Mediterranean, but its use in baking is more controversial. Many of us have fond memories of the comforting smell of the herb as it seeps into our baking, but what about baking with Rosemary? Rosemary as an ingredient True to its reputation as a culinary spice, Rosemary is not only widely used as a seasoning in marinades, but it also has a place in baking. The essence of Rosemary is that of a leaf of the herb itself - dry and bitter - and so when used as a seasoning or in cooking, Rosemary is often mixed with something else. This is most often olive oil, thyme, garlic and lemon. Rosemary in cooking Rosemary is most often used as an ingredient in mixed vegetable salads, where its sharpness cuts through the vegetable flavour. Rosemary is commonly added to dishes that include tomatoes, but it is also used for preparing meat dishes. It is often the preferred herb for pork and lamb, and occasionally for fish such as salmon. The smell of Rosemary leaves sprinkled over the food prior to cooking will lend its flavour to all dishes, but note that it is not to be used as a substitute for lemon. Rosemary in baking Rosemary is used to season bread and cakes and it is commonly used in making things like shortbread. Cooks also often like to put rosemary leaves in the mix with sugar and shortening to make a paste to be used as a topping for both sweet and savoury dishes. Some of the most traditional cakes and breads use rosemary, usually added to the dough before baking. So it is no surprise that rosemary is the herb of choice for cakes such as lemonade, rosemary and almond bread and herbed scones. Rosemary is also an important ingredient in making the beloved mid-winter cake, crumb cake or shortbread. Many bakers find rosemary to be a key ingredient in making shortbread. Rosemary keeps Good quality Rosemary is, in fact, a very long-lived plant. Keeps many will use Rosemary that they buy from the supermarket for at least 6 months
