Suzuki Outboard Shop 2 225 Hp 1985 1991 Includes Jet Drives 1st Edition By. Superstar NaÂ .Â .The

present invention relates to a method for the enzymatic treatment of a pulp for the production of cellulose pulp. More particularly, the invention

relates to a method for the enzymatic treatment of a pulp with a combination of endoglucanase and exoglucanase which can release the lignin from

the pulp by consuming it as a carbon source, thereby effectively disentangling and separating at least part of the lignin which has been formed in

the primary stages of the Kraft cooking of the pulp. As methods for the production of cellulose pulp from fibrous material with high chemical purity,

have hitherto been known a sulfite method, a soda-anthraquinone or sulfite-sulfuric acid method, a Kraft system, a sulfite-$KMnO_4$-H_2SO_4

system, a soda-KMnO.sub.4 -H.sub.2 SO.sub.4 system, and so on. A cellulose pulp of good quality can be obtained in the above-mentioned known methods,

and the resulting pulp is clean in the absence of lignin, whose presence in the cellulose pulp results in impaired strength. The sulfite method

and the above-mentioned known soda-alkali pulping methods, however, are disadvantageous in that they are accompanied with the formation of substantial

amounts of undesirable products, since they employ strong alkaline solutions. In addition, the sulfite method and the soda-alkali pulping

methods require an initial treatment for the removal of non-cellulosic materials which can be regarded as impurities. According to the Kraft system, the

cellulose is dissolved by cooking the pulp at a temperature of approximately 90 to 140.degree. C. in the presence of strong alkaline solutions which contain alkali

metal chlorides and non-neutralized calcium salts. This so-called Kraft cooking is conducted in a mixer-extractor machine. The Kraft cooking is a

very effective pulping method for solving most of the impurities, but the greatest disadvantage of the method is the formation of substantial amounts of

undesirable lignin-containing by-products, which are inevitably formed as a consequence of the harsh chemical treatment to which the

cellulose pulp is subjected in this method. Further, Kraft cooking produces a considerable 6d1f23a050
