Found my photograph of the day. Click the image to enter the Flickr pool on which it's featured. Yes, the thumbnail is a bit grainy, but you can always click on it to see the image in full resolution When it comes to Retouching images, I can tell you that Photoshop can make a huge difference. It's really an ingenious tool to be part of a photographer's kit. The very first major feature is the Adjustment Layers panel. I find that with any editing tool, it's really important to organize your editing into layers. In Photoshop, you have the opportunity to add extra adjustment layers as you need to, which helps immensely when you're doing merging work. There are plenty of Adjustment Layers built-in for color, tonal, and Vibrance adjustments, but the tool can do so much more. Sketch is another great tool that allows for non-destructive processing of images. For example, I can add a face to the background at a point of my choosing. It's not final, but it's basically a Clone Stamp-like tool. I can simply apply it, and the image is expanded. Then, I use the Edit Paths Tools to draw with my fingers and bring it back in place – or add nails for that matter. Using the Pencil, I can draw freehand with a

natural and fluid motion. I can bring in adjustments, or even build a Gradient or Pattern. The process is much more intuitive than using Photoshop. Click the message button on the top menu toolbar to get notifications when a new letter arrives in your inbox. When you are in the Organizer module, you will see a message icon that is just below the Sidebar section of the Organizer module. This icon displays a message and remains active for as long as you have any unread messages.
