I know there are a lot of users that get a hug picture when they double click or double click and drag in Lightroom, what is the exact opposite in Photoshop. As per my Previous experience with PS, Click+Double click is feature that was introduced in PS 5,5.1 and it is very useful when you are working on images you have shot from a camera. It will back up the file each time you click on it. I simply love it in PS, I don't like it in LR. But i guess its more or less a personal choice, you need to look for what works for you. I would suggest it to everyone to try both versions of the software and chose for yourself which one is sems better to you. Hope you understand. Since then, we've identified the deep passion and desire from consumers to tell their stories with art. We also realized that today, there are more ways than ever to share and create content. With Photoshop Camera, we are extending our mission to help democratize creativity in an effort to empower all our creative community. With that, we're excited to share our vision today with all of you! For most of the 20th century, photographers relied on film cameras to capture their memories. As the digital age began, the image editing landscape changed as we transitioned to film, starting with Lightroom and Photoshop. These were the two flagship products. Since then, many more camera and photo editing apps have come and gone over the years. It turns out, Photoshop has always gone in peaks and valleys, and this time was no different. When the new age of technology began, Photoshop just wasn't ready. It wasn't until 2012, nearly a decade after the launch of Photoshop, that Adobe reintroduced the original concept of photo editing and digital photography. Adobe Camera Raw was the perfect reimagining of what it was like to edit raw, unedited images. This studio-quality editing environment allowed photographers to quickly and confidently open, work on, and save images without having to stop anywhere else in Lightroom.In 2018, the company entered the space again and introduced Photoshop Photomerge to the world. This tool grew out of the best-selling feature within Photoshop in the previous decade, which was layers. It's a great example of how we solve complex problems of consumer technologies by leveraging expertise from much more experienced domains, in this case photography, and further extending our product and category depth of work, leveraging our deep science-based engineering skills. e3d0a04c9c

This tool offers a myriad of qualities that differentiate it from other selection tools. It automates the separation of the object of interest from the rest of the picture. In addition, Photoshop has what is called intelligent auto. That's a quite a standard blend of smart and neural networks, AI, and machine learning for determining things, like the brightness, contrast, and color of an image. The 2019 version of Photoshop has this "smart" in over 56 jobs and now includes monumental change detection. This feature scans the image for new changes, giving you the ability to perform automatic adjustments for clearer, more professional-quality images. Photoshop also offers smart objects, or layers, and smart filters. 2019's version of Photoshop now gives you full control over the size, placement, the transparency, and cropping of the objects. It automatically optimizes the creation of images and retains the right to edit the selected object outside of a group. Finally, the 2019 edition of Photoshop brings innovative features like Grid and Stacks. The Stacks feature fills the empty space with content, the way you would add a photo to a slideshow. This list of tools is not only remarkable as an indispensable feature but consists a masterpiece in the field of digital technology. It is a testament that Photoshop is the only desktop picture processing software that comes with state-of-the-art design tools.
