The DLLs and the API are also used for integration into other programs. The Dynamic Link Library (DLL) (or DLL Interface) is an AutoCAD extension for interfacing with programming languages such as Visual Basic, AutoLISP, C, C++, C#, Fortran, Pascal, Visual Basic for Applications, and Visual Basic.NET. AutoLISP and Visual LISP code can be executed directly from the AutoCAD environment and a number of custom applications and plug-ins. The Dynamic Link Library (DLL) is a programming interface that enables companies and individuals to create applications for AutoCAD. DLLs are available for Windows, Mac and Linux operating systems. Available DLLs AutoLISP AutoLISP is an API for AutoCAD to interact with a computer and a programming language. The AutoLISP API provides functions to work with objects and documents. Visual LISP Visual LISP is a programming language for defining functions, procedures and objects. The compiler translates LISP code to an executable form and builds the corresponding Visual LISP DLL that can be integrated in any program. Visual LISP is a statically linked library for AutoCAD, as opposed to the executable form of Visual LISP. The Visual LISP API provides functions to work with objects, documents and drawings. C C is a general-purpose, multi-paradigm procedural programming language. The C API can be used in AutoCAD applications such as.NET, C++, JavaScript, VBA and so on. The C API can be used to develop AutoCAD applications using C. C++ The C++ API is an extension of the C API and is designed for developing applications based on the C++ programming language. A language extension for the C++ API is Visual Studio for AutoCAD, an integrated development environment for the C++ programming language. JavaScript JavaScript is an interpreted programming language, used to create web pages, animations, and interactive applications.
