AutoCAD is the software used to create buildings and blueprints for the construction of buildings. Use AutoCAD to draw any type of structure: office buildings, schools, factories, shopping malls, and all others. It is an amazing software that is very accurate and easy to use. One of the many features is to draw complex, complicated shapes with ease. Draw a perfect straight line, a perfect circle, a perfect ellipse or a perfect circle. AutoCAD is a multi-platform CAD software, and is used by architecture firms to draw and create building blueprints. It is also used by car manufacturers, computer hardware and software companies and by construction companies to help them build the right shape of their buildings. These drawings are then turned into blueprints for construction to take place. Why AutoCAD? As mentioned, AutoCAD is a commercial CAD software that is used to create CAD drawings and blueprints. This is one of the most important and unique features that makes AutoCAD

stand out from other CAD software. With AutoCAD, the user has a strong ability to draw the shapes that he or she needs and more. One example would be, in AutoCAD, the user can draw perfect circles, perfect ellipses, perfect rectangles and other such shapes with ease. Most other CAD software lacks these features and requires you to be very specific with the amount of the shape you want drawn. This is not only tedious but it also requires the user to have a very strong drawing ability, which is something that most people do not have. With AutoCAD, on the other hand, you get to create complex and complicated shapes with ease. Another aspect that sets AutoCAD apart from the rest is that it has an AutoCAD LT version, which allows the user to create and edit drawings using a basic Windows environment. This is a great option for those who are new to AutoCAD. It is also good if you are working on a budget as the software is not very expensive. AutoCAD LT is also a great choice for those on a tight budget as it is a low-cost solution. Another reason that people choose AutoCAD is the fact that it is one of the most popular and most used CAD software. This is an advantage when it comes to receiving support when you need it. Most companies that offer AutoCAD have technical support that is provided 24/7, making sure that you get support when you

Field of the Invention The present invention relates to image forming apparatuses such as laser printers, copying machines, facsimiles, and the like, and more particularly to image forming apparatuses in which a developing device and a fixing device are disposed in series along the conveying direction of a recording medium in order to fix an unfixed toner image transferred on the recording medium to the recording medium. 2. Description of the Related Art A belt type fixing device has been generally used as a fixing device in an image forming apparatus. In the belt type fixing device, a heated fixing belt is driven so as to be in contact with a heat roller and an endless belt is looped around the heat roller and the fixing belt so as to be heated by the fixing belt and so as to be in contact with a recording medium. As a recording medium is conveyed between the fixing belt and the heat roller, a toner image on the recording medium is fixed to the recording medium by heat of the fixing belt. In this case, since the recording medium is not rubbed against the fixing belt, image quality of an image fixed to the recording medium can be maintained. In the above-

described belt type fixing device, it is necessary to maintain the contact pressure between the fixing belt and the heat roller and a surface temperature of the fixing belt in order to maintain good fixing performance. In order to maintain the contact pressure between the fixing belt and the heat roller and the surface temperature of the fixing belt, a belt tension is applied to the fixing belt. As a method of applying the belt tension, it is necessary to apply a belt force to the fixing belt by a belt force application means which is disposed between the heat roller and the fixing belt.
