Q: Are there any established techniques for an asymptotically closed, asymptotically flat manifold without boundary? We say that (M, g) is an asymptotically closed, asymptotically flat manifold without boundary if it is asymptotically closed, and if there is a compact set $K \subset M$, and a metric g_0 on $M \setminus K$, such that the following holds: g and g_0 are conformally related by $g = e^{2\rho} g_0$, where ρ is a smooth function on M that vanishes to infinite order at K . g and g_0 are each asymptotically flat on $M \setminus K$.

Question 1: Is there any such manifold that is in addition a topological manifold? Suppose we further assume that M is a smooth manifold, in addition to being asymptotically closed, asymptotically flat, and without boundary.

Question 2: Is there a nice description of the topology of the interior of such a manifold? A: Yes, this is not true. I would argue, though, that asymptotically flat metrics with boundary are the most "natural" case. Namely, let (M, g) be an asymptotically flat manifold with boundary. Then $M \setminus K$ is a manifold with boundary, where K is a compact set. Let $S^n \setminus B(R)$ be an asymptotically flat manifold with boundary. Then $S^n \setminus B(R)$ is diffeomorphic to $M \setminus K$. If you'd prefer a non-diffeomorphic example, you can let (M, g) be an asymptotically flat manifold with boundary that's diffeomorphic to $S^1 \times [0, 1)$. Then on $[0, 1)$, g is trivial, and on $(1, \infty)$

Muslim Australians and muslims, how they will integrate and assimilate or maintain their traditional cultures. I believe that once non-muslims are at peace with their only religion being Islam, they will be more capable of being good uncles to their Islam children. Yet the reverse would be true for the muslims, who are scared to intermarry and will likely maintain their Muslim culture and beliefs for many generations. 1. Over generations the non-Muslim population is bound to lose out economically, but this is going to happen regardless of what Australia's borders are. All we can hope for is that it be gradual. The non-Muslim population is already heavily fragmented and the economic divide will only increase over generations without far-reaching immigration policies. 2. The non-Muslim population will continue to be a minority, or even decline after allowing more Muslim immigrants. This is entirely dependent on the government's ability to control the flow of Muslim immigrants and their offspring. 3. Immerse non-Muslim children in the traditional culture and they will be Muslims by choice. If the children are allowed to continue with their modern education however, they will be liberal progressive Muslims, and will never be assimilated nor feel real sense of belonging. 4. Any non-

Muslim who doesn't want to assimilate into Islam will be forced to do so. When Muslim majority population is built, either by large scale Muslim immigration or by having Muslim children grow up without any experience other than Islam, who will be non-muslim? 5. The Muslim population, however, will likely be positive towards assimilation, as they are liberal progressives and believe in the concept of the melting pot. 6. The Muslim population will be progressive by default, thus the government will likely instigate policies to make non-muslim
