## **New! NTSYS Pc 2.2 Freel**

ntsyspc can be used for the analysis of fingerprint, digital image, and geographic data as well as for the determination of basic genetic distances between populations. the program is mainly used for population genetics studies, but also can be used for the comparison of populations from different countries. new results can be obtained by comparing the regions of the map. the geographical regions can be divided into different sub-regions and numbers of provinces can be entered. the regions can be sorted using the data in the table or by their name. annotation of plants is always a difficult task. the most recent version of ntsyspc with the aid of morphodraw software can be used for the documentation of morphological

---

characters. the characters can be classified into several types and stored in different formats. ntsyspc can also calculate similarity and dissimilarity indices between pairs of objects, and perform cluster analysis. the program can also be used for univariate and multivariate analysis. the software can be used for investigation of genotypic variation, polygenetic variation, and environmental variation. ntsyspc can also be used for detailed comparison of morphological characters. each morphological character can be documented individually or in a simplified form. the program enables the user to calculate the mean value and standard deviation of the characters. the characters can be used for the quantification of plant organs, measurements, and anatomical characters. ntsyspc can also be used for

---

the calculation of the frequency of the characters for each taxon. the character and taxon can be stored separately in databases. 5ec8ef588b
