 Nebenladungen. https://github.com/ATHRISHAM/geology_tools/blob/master/Audio_Codes_For_Fault_Analysis.pdf. geology This can be done easily by replacing the tag with . Also, in the text, should be replaced with . $\usepackage{amsmath} \usepackage{wasysym} \usepackage{amsfonts} \usepackage{amssymb} \usepackage{amsbsy} \usepackage{mathrsfs} \usepackage{upgreek} \setlength{\oddsidemargin}{-69pt} \begin{document} G(x,y)=G(x,y)=\left\{ \intop_y^x dx'G(x,x') \right\} -I(x,y)$. The term $I(x,y)$ in the third line of Eq. [32] is introduced to reduce the numerical dispersion in the calculation. In the evaluation of $I(x,y)$ in Eq. [32], the value of x is always less than that of y . Figure [3] shows numerical results of the time-resolved transmission spectrum with respect to the delay time. The time-resolved transmission spectra are obtained by applying the experimental setup shown in Fig. [2](a) to the compound sample. The left column corresponds to different values of the ratio of the left-hand path length over the right-hand path length ($L_{\sim l}/L_{\sim r}$). The right column corresponds to different values of the parameter α for a fixed value of $L_{\sim l}/L_{\sim r}$ (1.5). The relative phase difference between the left-hand and right-hand path length is fixed at $\pi/2$ rad. The black solid line corresponds to the experimental data, and the red dashed curve corresponds to the numerical result. The top and bottom rows correspond to the results obtained with the refractive indices of the compound sample: $n^* = 1.5 \pm 0.005$ and the refractive index of the auxiliary sample: $n^* = 1 \pm 0.005$. The numerical result based on Eq. [32] agrees well with the experimental data. The red line represents the imaginary part of the impedance

\[Eq. [32](#Equ32){ref-type=""}\]. For a fixed value of $L \sim l \sim L \sim r \sim$, the imaginary part increases as the absolute value of the parameter α increases. However, for a given α , the imaginary part of the impedance decreases as the refractive index of the compound sample (n) increases. The imaginary part of the impedance increases as the absolute value of the parameter α decreases.
