this results in program conflicts since od5 and od5.1 were not designed to co-exist on the same system. do not disable the autorun feature. if you have disabled the autorun feature and run setup.exe, the version checking may not ever take place and the upgrade of the od5.0 to od5.1 software process may not be successful. workaround: run strtdsc2.exe from the installation cd instead of setup.exe. if the version on the machine and in the autorun.inf files does not match, a dialog is presented with the following message: 'a previous version of ondemand5 exists on your system. do you wish to update now' click ok and you should be taken through the complete upgrade/ installation process. 2. popup windows options should be disabled at installation time. this is a software update/ installation process. therefore, program specific files, registry entries and/or system files and resources will get updated. { context: type: faqpage, mainentity: [{ type: question, name: what is truckseries, acceptedanswer: { type: answer, text: truckseries is professional, medium- to heavy-duty truck repair information software that supplies technicians with industry-leading estimating, diagnostic trouble code and repair information in a single application. it, like prodemand auto repair information, is powered by the advanced search technology, 1search plus. it has a user-friendly graphical layout that makes it easy for technicians to instantly find the information they need for a diagnosis and repair. } }], { type: question, name: why do i need truck repair and maintenance software, acceptedanswer: { type: answer, text: mitchell 1s truckseries is a suite of web-based
