InterVideo WinDVR 3.0.rar Serial.The present invention relates to a phototransfer printer. As disclosed in U.S. Pat. No. 4,337,443, the prior art phototransfer printer comprises a light source (for example, a halogen lamp or the like) for supplying a light beam in the form of a spot, a polygonal mirror for scanning the light beam on a phototransfer drum (also called a photoreceptor) rotating in a given direction, and a photosensitive drum for receiving the light beam which has been reflected by the polygonal mirror. The light source, the polygonal mirror, the photosensitive drum, etc. are disposed at a predetermined distance from one another and are supported by a common shaft which is journaled on a supporting frame or a chassis. In the prior art phototransfer printer, it is necessary to use a frame or chassis for supporting the light source, the polygonal mirror, the photosensitive drum, etc. and to provide a bearing between each of the elements and the frame or chassis. Therefore, the printer has a large size and is heavy, and the manufacturing cost is high.1. Field of the Invention The invention relates to a calibration system and a calibration method in a plasma focus generating apparatus for generating a plasma focus by generating a plasma in a discharge tube and focusing it on an object to be processed. 2. Description of the Related Art A plasma focus generating apparatus is widely used in the fields of physics, chemistry and semiconductor processing in the production of semiconductor devices. The plasma focus generating apparatus includes a discharge tube and a lens for focusing the discharge energy as the discharge energy is dispersed. In such a plasma focus generating apparatus, a plasma focus is generated inside the discharge tube. Such a plasma focus generating apparatus is disclosed, for example, in Japanese Unexamined Patent Publication (Kokai) No. 58-122947. The discharge tube of the above-mentioned plasma focus generating apparatus is constructed so that high voltage is applied to the electrode, such as a graphite electrode, provided inside the discharge tube to generate plasma. The plasma focus is generated in the discharge tube by focusing the energy of the high voltage discharge, which is dispersed, on an object to be processed. When the plasma focus generating apparatus is used for processing an object, the discharge tube is filled with a dielectric gas, such as argon. The
