The reason I like Elements is that it lets you start creating a photo almost instantly. After you've set-up your camera and edited it in Capture (which is very easy and fun), you can crop and straighten using tools in Crop & Straighten. A full crop of your image is then available in Crop (either Keep Aspect, Fit, or Zoom). You can then fill in details like people's faces (in Crop & Add People) or write with the Inking tool. After the ink tool is done, you can choose to apply the outlined, colored, or combined effect. You can then export your cropped image as a layered PDF or SVG file. Zoom in to look at the individual layers and make whatever adjustments you'd like to the image. In Photoshop you can then merge the various elements together to create a final image. Animated effects can also be included. This power is present in most of the Elements tools. Elements supports both RAW and JPEG files, but RAW makes the most sense for me. When I shoot in RAW, I create Photoshop actions to process my files during export. That way I know the image will be ready for post processing. There is a big difference between the Elements standard version and the PhotoShop Standard (not Creative Cloud) version, however, so I don't recommend putting off your upgrade until the time comes. If you use Elements as your only photo editor, prefer it to Photoshop or Lightroom, then stick with the standard edition. Like most image-editing platforms, Elements offers two modes of editing: Undo and Redo, or no Undo and Redo. When you're done tweaking your image, press and hold the space bar on the keyboard to recalibrate the histogram. You'll also get a new slider next to the Exposure Spot tool. This isn't an Exposure Spot with which you can edit the exposure though. It's an accurate point based on the current histogram.

You can create layer masks (a way to hide or copy selected areas), and control the contrast, hue, brightness, saturation, and lighting in your image with Exposure, Highlights, Shadows, Whites, and Blacks, respectively. You can also make adjustments with typical editing tools such as the Brush, Eraser, and Lasso tools. There is one advantage of pen-based tablets over pencils that touch-screen tablets don't have. They don't feel as "physical". With pencils, it's always a race against a deadline if you're working on a client's design. It takes longer for the pencil to get to the point where your pen will reach if you aren't already there. But with a pen, it's easy to keep doing what you're doing whether your victim is sitting beside you or not. The other advantage is that it's harder to make mistakes that bother you.
