Libraries have been available in previous versions of Lightroom and Photoshop and, as far as I know, in all other bulk image editing programs. In this version, you can organize your image library into Collections (groups) to create convenient image sets. You can analyze your images (i.e. determine an exposure, perform one or more sharpening adjustments, and so on) by using the view mode Sorting, Expose, Adjustments, and Metadata in the Collections view. The Collections view also has an associated preview, so you can see what the image result will look like without having to do any editing. Everyone has their preferences for how they store images, and you can organize them however you like. Collections are basically image containers that you can associate with one another and they can be used to create reports or other filters. For those photographers who are very active in supporting the Adobe Creative Cloud and working on its various components, this version of Lightroom is a nice update. Sharing your work among other Photoshop users is still done by using cloud documents. Or, you can always load your images into Photoshop and then export to Discreet Graphics Viewer (a.k.a. Adobe's equivalent of Aperture). With the previous version of Lightroom, I received or finished exporting RAW images to JPEG all the time. This version, when in the photo grid in the viewfinder, I have visibility of the original RAW files or the image previews of the files. This is a big plus since, in some ways, I feel less anxious knowing that my RAW files are stored safely. In my particular case, I like having the original files available for review and editing as once I'm satisfied with them, I'll export them to the appropriate place.

**What it does:** In case the new update doesn't let you shoot photos directly, the camera app integrates with the software's Raw conversion tool. As you take a photo, it instantly faces the same changes you make later. However, the settings you chose in the Raw Conversion tool are not applied at the time. "**What makes it unique:**" The application has a pre-defined list of shots that come with presets. These presets go by the name of tones and they mean something to you. The app also has an auto mode which gets it right more often than not, but it's not foolproof. When asked what they are looking for while designing a logo, one respondent said that they are looking for something that communicates the brand's "brand" and the feeling of their brand. Some of the respondents also pointed out that they are looking for something that would be memorable. Developed by Adobe, Photoshop Camera is a new mobile app that brings Photoshop's professional quality design tools to the entire Creative Cloud ecosystem, allowing you to instantly share creations anywhere and at anytime. Simply capture things you see with your camera, tap the screen, and Photoshop Camera will suggest and curate a new concept. It's then up to you to shine or dull it as you see fit, from fine-tuning the highlights of a live action photo to changing the hue of an existing photo in order to create completely new creations. You can also use the app to process raw images without capturing them first. 933d7f57e6
