J. Lang Charles H. J. Lang (born 12 January 1937) is an American computer scientist, physicist and Director of the Computation Institute at the University of Michigan, where he founded the Computer Science and Engineering Department. Life and work Lang graduated from the University of Michigan in 1958, and got a master's degree at Harvard University in 1963. After getting a Ph.D. at the University of Minnesota in 1964, he worked as a researcher at IBM and the University of California, Los Angeles. He took a position as a research associate at the University of Michigan in 1966. In the meantime, in the University of Michigan, Lang co-founded the Computer Science and Engineering Department. In 1970, he did a first design of the Computer Science Building, with his colleague John L. Hennessy. In the same year, Lang published On the Real Numbers of Computability and Computability-Theoretic Recursions, which was a major contribution to the model-theoretic investigations of computability. The book has become one of the classic works of the emergent discipline of the theory of computability. In 1972, Lang co-founded the Institute of Advanced Studies in the Humanities (IASH) at the University of Michigan. In 1978, Lang became the founding director of IASH, and he was its director until 1997. Under his supervision, IASH became a "center" (renamed to "institute" in 2011) within the university. In the late 1980s, Lang founded the National Science Foundation-supported Center for Computational Research at the University of Michigan. Together with Hennessy, Lang published the influential Computer Architecture textbook in 1989. In 1990, Lang started an industrial partnership with Sony Computer Science Laboratories. The two companies founded the University of Michigan's Comprehensive Computer Science Research Center, and Lang became the center's founding director. In 1994, Lang became the founding director of the center. This collaboration was continued by the duo up to 1998. In 1999, Lang became director of
